New ITIF report shows carbon tax helps support innovation and economic growth

Washington, D.C. – The Information Technology and Innovation Foundation (ITIF) released a new report today by senior fellow Joe Kennedy detailing how a market-oriented carbon tax would induce innovation in cleaner technologies and boost economic growth.

“This report reinforces that American innovation, not government regulation, is the best way to advance clean energy,” said Alex Flint, Executive Director of Alliance for Market Solutions. “A carbon tax would create demand for low-carbon technologies and, as a result, drive economic growth. It is an efficient solution that would not only lead to more investment, but reduce other taxes.”

To read the full ITIF report, “How Induced Innovation Lowers the Cost of a Carbon Tax,” [click here](#).

The Alliance for Market Solutions (AMS) aims to create a conversation among conservatives on the benefits of market-oriented solutions to one of America’s pressing economic challenges: advancing clean energy and reducing carbon pollution. AMS believes in the need for pro-growth solutions for our economy, replacing harmful government regulations, and responding to changing public attitudes and demographics.

###

[Alliance for Market Solutions \(AMS\)](#) is an organization of conservative leaders with experience in business, government, and the intellectual community who know that markets and economic incentives are the most powerful drivers of change and are more efficient and effective than top-down regulation. We aim to educate conservative policymakers on the benefits of market-oriented solutions to one of America’s most pressing economic challenges: advancing clean energy and reducing carbon pollution.

The carbon tax policy we support is consistent with a pro-growth conservative agenda. It would replace costly regulations and prevent new regulations from burdening families and job creators. And it would eliminate economically harmful taxes on investment and family incomes.

AMS is a 501(c)(3) non-profit educational organization. We don't engage in electoral politics on behalf of any candidate, campaign or party. We are recruiting allies and developing policy analyses to help conservative policymakers consider a pro-growth, conservative carbon tax policy.
