Request for proposals: The conservative case for carbon taxation versus regulation

Washington, D.C. – The Alliance for Market Solutions (AMS) today announced the release of a new [request for proposals](#) (RFP) for policy analyses of the comparative advantages of a revenue-neutral carbon tax as a way to address carbon pollution relative to regulatory strategies, subsidies, or directed federal spending programs. This is third RFP the AMS has issues since its inception two year ago.

The organization is seeking proposals from qualified researchers for new empirical research, policy evaluations, literature reviews on relevant focused areas, and other related analysis suited for a public policy audience.

AMS's goal is to make multiple individual research awards in the range of \$10,000 to \$35,000.

Proposals are due September 16, 2019, after which awards will be announced in approximately four to six weeks.*

For more details, including evaluation criteria and submission requirements, download the full RFP [here](#).

###

[Alliance for Market Solutions](#) (AMS) is an organization of conservative leaders with experience in business, government, and the intellectual community who know that markets and economic incentives are the most powerful drivers of change and are more efficient and effective than top-down regulation. We aim to educate conservative policymakers on the benefits of market-oriented solutions to one of America's most pressing economic challenges: advancing clean energy and reducing carbon pollution.

The carbon tax policy we support is consistent with a pro-growth conservative agenda. It would replace costly regulations and prevent new regulations from burdening families and job creators. And it would eliminate economically harmful taxes on investment and family incomes.

*Since original distribution of this press release, the submission deadline was extended and is reflected in this version.

AMS is a 501(c)(3) non-profit educational organization. We don't engage in electoral politics on behalf of any candidate, campaign or party. We are recruiting allies and developing policy analyses to help conservative policymakers consider a pro-growth, conservative carbon tax policy.
