### **Request for Proposals: The Conservative Case for Carbon Taxation**

WASHINGTON — The Alliance for Market Solutions (AMS) today announced the release of a new request for proposals (RFP), the organization's fifth since its inception in 2017, for policy analyses of a carbon tax to address carbon pollution and improve economic growth.

AMS seeks to sponsor research studies and reports suited for a public policy audience. Proposals should address one of the following topics:

1. A carbon tax as it compares to other policy responses to climate change (e.g., regulations and subsidies).
2. Regional, national, or industry-specific impacts of a carbon tax or a carbon tax relative to an alternative carbon emission reduction policy.
3. A U.S. carbon tax as it relates to global trade, energy innovation, or carbon capture technology and deployment.
4. Other matters pertaining to a carbon tax relative to alternative policies in the field of economics, public policy, or political economy.

AMS intends to distribute multiple individual research awards in the range of \$10,000 to \$35,000, depending on a proposal's scope and, if relevant, the adequacy of resources from the applicant's organization.

Proposals are due August 1, 2021, but early submissions are encouraged. Awards are anticipated to be announced by August 31, 2021.

For more details, including evaluation criteria and submission requirements, download the full RFP [here](#).

###

*[Alliance for Market Solutions](#) (AMS) is an organization of conservative leaders with experience in business, government, and the intellectual community who know that markets and economic incentives are the most powerful drivers of change and are more efficient and effective than top-down regulation. We aim to educate conservative policymakers on the benefits of market-oriented solutions to one of America's most pressing economic challenges: advancing clean energy and reducing carbon pollution.*

*The carbon tax policy we support is consistent with a pro-growth conservative agenda. It would replace costly regulations and prevent new regulations from burdening families and job creators. And it would eliminate economically harmful taxes on investment and family incomes.*

*AMS is a 501(c)(3) non-profit educational organization. We don't engage in electoral politics on behalf of any candidate, campaign or party. We are recruiting allies and developing policy analyses to help conservative policymakers consider a pro-growth, conservative carbon tax policy.*
